ENERGY SOLUTIONS: Manifesto

A cross-party, cross-industry network bringing together key stakeholders

Energy Solutions is a cross-party, cross-industry network that connects key members of the European Parliament with stakeholders from all corners of the energy industry that are committed to completing Europe's energy transition from fossil fuels to clean, safe, and affordable energy. The network has, since its founding, aimed to foster trust between policymakers and relevant industry stakeholders by bringing people together to identify solutions.

Our vision:

Energy Solutions envisions a Europe powered by clean, renewable energy, enabling sustainable economic growth and global competitiveness. Our objective is to establish a fully decarbonized, resilient, and interconnected energy system that balances sustainability, affordability, and security. By driving the expansion of electrification and renewable technologies, we aim to position Europe as a global leader in clean energy innovation and strategic energy independence.

Energy Solutions will work to ensure:

- Clean, affordable and European-produced energy.
- A swift and just phase-out of fossil fuels.
- Resilience and security in Europe's energy supply without fossil fuels.
- Investment in infrastructure to support the energy transition.
- A regulatory framework that incentivizes renewable energy solutions and energy efficiency.

Energy Solutions members agree that:

- We need an *Electric Europe* – direct and indirect electrification of all sectors based on clean, renewable energy sources.

- Europe needs to ensure affordable, clean and secure energy through a complete and swift phase out of fossil fuels.
- A true, interconnected European Energy Union is essential to ensuring affordable electricity and security of supply across borders.
- Renewable energy production should be scaled up, with significant investments in wind, solar, hydro, and green hydrogen.
- Grid infrastructure must be modernized to handle the increasing share of renewable energy.
- Europe must take global leadership in climate action by setting ambitious targets – both climate targets, electrification targets and targets for renewable energy.

Energy Solutions is driving the green transition

Together, we can build a cleaner, more resilient, and energy-independent Europe. The transition to sustainable energy is not only an environmental necessity but also an opportunity to drive economic growth, competition, security, and a stronger, more united Europe. Energy Solutions calls on policymakers from different parties in the European Parliament to join forces in shaping a sustainable and affordable energy future for Europe.
